

Athira Mohandas

Data Analyst/BI Developer/Data Engineer

[LinkedIn](#) ~ athiraanoobmohandas@gmail.com ~ 1-289-952-9694 ~ Hamilton, Ontario, Canada

PROFILE

Results-driven Data Analyst with over 4 years of experience in **collecting, transforming, analyzing, and interpreting large datasets** to support data-driven decision-making across small to mid-sized projects in both **Agile and Waterfall environments**. Proficient in tools and technologies including **SQL Server, SAS, SSIS, Power BI, and Tableau**, with a strong foundation in data integration and visualization.

Holds a **Master's degree in Computer Applications**, currently pursuing a **Data Science Certification** from the **University of Guelph**. Certified as a **Microsoft Power BI Data Analyst Associate** and **CCSK (Certificate of Cloud Security Knowledge) professional**, with a growing focus on cloud-based analytics and security-aware data practices.

EDUCATION

- Master's degree in computer applications, India [WES Certified]
- Bachelor of Science in Computer Science, Mahatma Gandhi University, Kerala, India
- Certification in Data Science with Machine Learning, University of Guelph, Canada

TECHNICAL SKILLS

Data & ETL Tools: Power BI, R programming, SAS, SSIS, Excel, SQL Server, PostgreSQL, Python, SSMS

Programming & Scripting: Python, R, SQL, C, C++, Java

Cloud, DevOps & Infrastructure: AWS (EC2 instance creation), IAM, Load Balancing, DevOps, Linux, Azure VM

Testing & Automation & Workflow Tools: Selenium, Unix Shell, Jira

EXPERIENCE

Academic Project

Data Science with Machine Learning, University of Guelph, Canada

(Current)

- **Data Science & Analytics:** Conducted end-to-end analytics on **Ontario Public Libraries dataset** using R—data wrangling, exploratory analysis, revenue-per-cardholder metric, visualization, and stakeholder-ready recommendations.
- **Machine Learning & Data Mining:** Applied **supervised and unsupervised learning** techniques, including **K-means clustering, linear regression, logistic regression, and SVM classification**; built models, evaluated performance, and visualized results on real-world datasets (Titanic, Zoo Animals, European Protein Consumption).
- **Big Data Analytics:** Hands-on experience with the **Hortonworks Data Platform, HDFS, Hive, and SparkR on Azure VMs**; processed and analyzed large datasets and compared platform applications.

2025-current

Internship

Technologies: Machine Learning, R

- Applied K-Means Clustering to segment provider data into performance-based clusters, enabling more targeted interventions and personalized healthcare strategy planning.
- Built and interpreted Linear Regression models to analyze the relationship between patient demographics and service utilization, supporting predictive operational planning.
- Developed Logistic Regression models to predict the likelihood of claim denials based on provider, procedure, and demographic features, improving claim approval accuracy.
- Integrated ML outputs into Power BI dashboards, allowing business users to interact with model-driven forecasts and classification outputs in real time.
- Used R and Python (scikit-learn) to preprocess data, engineer features, and train supervised and unsupervised learning models, enhancing decision support systems.
- Collaborated with business stakeholders to translate machine learning insights into actionable metrics and executive-level reporting.

Cognizant Technology Solutions Canada Inc., Ontario

2022 – 2024

Client –Blue Cross Blue Shield Minnesota

ASSIGNMENTS

Provider Search Team

Technologies- SQL, SSIS, SSMS, Power BI, Excel

- Adapted to new technologies quickly and worked in an Agile environment with Jira for project tracking, developed and deployed SSIS packages for data loading and file transfers, and wrote stored procedures in SSMS to support SSIS packages across various environments.
- Helped clients to load huge datasets with limited time and thus allow faster accessibility.
- Developed and optimized SQL queries for business and reporting needs, performed data analysis in Snowflake, translated business requirements into technical specifications, and built Power BI dashboards to support informed decision-making.
- Worked as a database developer and also a for modifying the code after analyzing.
- Helped in onboarding new employer (new clients of BCBS) within a limited period than timeline.

Diabetes Dashboard Migration – Tableau to Power BI

Technologies – Power BI, Tableau

This project was to migrate Diabetes dashboard from visualization tool Tableau to Power BI.

- Migrated diabetic-focused Tableau dashboards into **Power BI**, ensuring **data accuracy, consistency, and compliance** with business rules.
- Leveraged DAX, calculated columns, and ETL validation to achieve a 100% data match post-migration.
- Delivered **actionable insights** to business stakeholders and promoted adoption of **self-service BI reporting** for healthcare performance monitoring.
- Supported **ETL QA through unit and integration testing**, maintaining **data governance standards**.

Withhold Measure and Monthly Rate Reports

Technologies- SAS and Postgres SQL

This project was to create a Withhold Measure Report and Monthly rate report.

- Gathered business requirements through effective stakeholder communication and performed **ETL and data retrieval** from AWS Redshift using Postgres SQL.
- Ensured **data quality, timeliness, and validity (data profiling)** through client reviews and generated reports in SAS and Excel.
- Provided innovative solutions to help business and clinical teams understand **financial implications tied to performance outcomes**, strengthening **process improvement initiatives**.
- Transferred **technical/functional knowledge** to stakeholders, building capacity for long-term data stewardship.

M&G Jewelers, Connecticut, USA

2018 - 2019

Data Analysis and Management

- Captured data, analyzed, extracted and inserted the data into MS SQL Server database tables, using Tracking software that resulted in providing insights to the client
- Checked the validity of the data in backend database tables (in MS SQL Server 2012), generated periodic reports by running prewritten Stored procedures.

Cognizant Technology Solutions, Kerala, India

2012 - 2013

Software Engineer

- Received Industry training on Object Oriented Programming, Database management systems and Data Warehousing.
- Worked on Data warehousing and Data analysis projects for Cognizant internal projects.

CERTIFICATION

- | | |
|---|----------------|
| • Data Science with Machine Learning and R Programming, University of Guelph and YWCA | 2025 – Present |
| • Microsoft certified Power BI associate | 2024 |
| • CCSK [Certificate of Cloud Security Knowledge] | 2025 |
| • Python Beginner [TransitToCollege] | |
| • Statistics Foundation, LinkedIn learning | |
| • Pework Foundations of Data Science, LinkedIn Learning | |
| • Attended National Mental Health Data Thorn | 2025 |

VOLUNTEER ACTIVITIES

Volunteered with a non-profit organization, “Sew n’ Save” for supporting frontline workers and was awarded by the Government of Canada as Pandemic hero volunteer.
